

Summary of positive test results for optional Covid testing between March 14, 2022, and June 30, 2022

MIT's Covid-19 dashboard was updated and simplified on March 14, 2022 to reflect the switch to optional, targeted testing. The updated dashboard did not include percentage-based positives as those choosing to test are more likely to be positive.

The dashboard included results reported by individuals who tested outside of MIT's Covid Pass program, including at-home antigen tests. Between March 14 and June 30, 2022, close to half the positive test results were from tests not administered through MIT.
